CAMSHAFTS AND LIFTERS

In choosing a CAMSHAFT for your 4X4 vehicle and tow vehicles, your ultimate goal is to increase both horsepower and torque within a useable RPM range to allow the engine to operate with the least amount of vacuum throttle opening. The result - better fuel economy, smoother idling, cooler running, and longer engine life.

Jeep 2.5-4.2-4.0 Engines

Grind Part*	RPM Range	Advertised Duration	Duration @ .050	Lobe Centers Available	1.6 Int/Exh	Comments:
HYDRAULIC						
	1500					
RV-O-B	to 5200	264	214	110"	470	Good torque & mileage - smooth Idle
H-264		264	214	108°-114°	470	Light towing - good performance & mileage - smooth Idle
H-6474		264/274	214/224	108-114	470/480	Towing - good performance -restricted exhaust (low smooth idle
H-268		268	216	108°-112°	480	Towing - wide performance range -smooth idle
H-274		274	224	108°-112°	480	Hi-performance street - fair vacuum - healthy exhaust sound
H-7464		274/264	224/214	108°-114°	480/470	Towing - Turbo charged - good performance - smooth idle
SOLID						
C-265	1500	265	224	106°-112°	460	Good performance & mileage
	to					
C-272	5200	272	224	106°-112°	464	Good all around power, higher horsepower curve.

Also available for Chevrolet, Ford and Dodge V-8 Engine except hydraulic roller

The use of incorrect springs with these cams could result in severe engine damage. Use only recommended valve springs.
